Must Read

***Microblading is a semi-permanent makeup application. Although 3D Eyebrow Microblading is effective in most cases, NO guarantee can be made that a specific client will benefit from the proceduredepth of color retention or retention at all.
This is the process of inserting pigment into the basal layer of the epidermis. It is a form of tattooing, cosmetic, though it is semi-permanent. Generally, the results are excellent but it very much depends on your skin texture, oiliness, scars, previous procedures etc. However, a perfect is not a realistic expectation.
Initially the color will appear more vibrant or darker compared to the end result.
Usually within 3-7 days color will fade 40-50%, soften and look more natural.
Uneven pigmentation can result from poor healing, infection, excessive bleeding during procedure or simply skin type. This is completely different with everyone and sometimes depends greatly on how you care for your new brows after but sometimes it is just your skin even with perfect aftercare. You may need a touch up appointment to correct if any of these factors were present at your blading. The pigment is semi-permanent and will fade over time. Additional Touch-Ups are likely needed within 6 months to 2 years. I have read and completely understood all that is written above about my Microblading
procedure with Modern Permanent By Inna Khodzinska. X
I consent to my brow (eyes, lips) pictures being used on Modern Permanent By Inna Khodzinska Social Media as gorgeous examples of brow work! X
I have reviewed all of these signed documents for procedure.

CONSENT

(Please read and initial each)

I understand that a certain amount of discomfort is associated with this procedure, and that swelling, redness and bruising may occur.
I understand that Retin A, Renova, Alpha Hydroxy and Glycolic Acids must not be used on treated areas. They will alter the color and cause premature discoloration of the pigment.
I understand that this is a semi-permanent procedure and that successful color saturation can NOT be skin typing, hidden scar tissue, previous permanent make up or laser treatments.
I will tell all skin care professionals or medical personnel about my permanent makeup procedures and especially if I am scheduled for an MRI.
I accept the responsibility to explain to you about the desire for specific color, shape and position for any procedure done prior to beginning of the procedure. I understand that the time to make any changes is when my outline box is drawn on. Once I accept the outline provided, I am consenting to it.
I understand that implanted pigment color can slightly change or fade over time due to circumstances beyond your control, and I will need to maintain the color with future applications.
I acknowledge that the proposed procedure(s) involves risks inherent in the procedure, and have possibilities of complications during and/or following the procedures such as: infection, misplaced pigment, poor color retention and hyper-pigmentation.
I have been quoted the cost of today's appointment, and have been advised that a touch-up session is highly recommended to make any adjustments to shape, color, and to fill any pigment that may have had poor retention. I certify that I have read or have had read to me the contents of this form. I understand the risks and alternatives involved in this procedure(s). I understand that skin type plays a huge role in such a semi-permanent procedure, which is why retention is not guaranteed. I have had the opportunity to ask questions, and all of my questions have been answered. I have reviewed Modern Permanent by Inna Khodzinska work, love it and I do acknowledge that at no time is there a refund of any or all of this procedure I am receiving today. I acknowledge that I have reviewed and completely understand the material given to me, and I authorize Modern Permanent by Inna Khodzinska to perform on my face the Permanent procedure desired today.

Microblading Aftercare Instructions

It is essential that you follow these instructions after your Microblading session. After your blading procedure a medical grade silicone will be applied to your brows. It should stay on 12-24 hours. Do not excessively sweat or wipe it off. Silicone must be washed off in 24 hours max. Unless I have advised you that you have an oilier skin type, please do not wash your face for 12 hours wash about 12 hours later OR if you feel excessively oily use gentle hair strokes. Air dry for 30 minutes then apply aftercare lightly 2x a day to keep the scabs from forming. Do this for a full 5 days of healing, then apply aftercare only at night to moisturize. Keep out of the sun for 7 days and after the 7 days keep sunscreen to aid in the longevity of the Microblading.

The following must be avoided during all 7 days post-Microblading procedure:

- 1. Increased sweating and swimming.
- 2. Hot sauna, hot bath, or Jacuzzi.
- 3. Sun tanning or salon tanning.
- 4. Any laser or chemical treatments or peeling, and/or any creams containing Retin-A or Glycolic Acid on the face.
- 5. Picking, scrubbing, peeling, or scratching of the micro pigmented area.
- 6. Drinking alcohol in excess, as it may lead to slow healing of wounds.
- 7. Driving in open air vehicles such as convertibles, boats, bicycles, or motorcycles.

What to expect after your Microblading session.

Your new temporary eyebrow will go through several phases during the healing cycle. The pigment will appear very sharp and dark immediately after the procedure. This is because the pigment is still sitting on top of your skin, and has not yet settled in completely. Day 2 is sometimes hard, it's normal. The color of the pigment will soften gradually. Once the healing of the skin starts taking place, it will look like dandruff flakes or dry skin. This might give you the impression that the color pigment is fading too quickly, however, usually this is just superficial color and dry skin being naturally removed from your eyebrows. Once completely healed and aftercare is completed I advise applying a layer of sunscreen SPF30 up to SPF50 on your eyebrows when exposed to the sun. Sun exposure might cause the color pigment to fade away and time might be extended. If you start to scab, do not pick at them. Just let them heal, your healing time might be extended. It does happen however it is not a desired outcome and may be due to skin typing.

But most of all enjoy new gorgeous brows! I would love it if you would leave a review on my Facebook business page!
